"The quantity of IP block is really great."

The Client _

BuyCheapRDP was founded in 2018 and specialized in providing RDP services with advanced features. It helps its clients achieve the highest possible levels of operational excellence by offering a comprehensive range of services and reliable RDP servers. It also provides Windows VPS services.

The business also offers unique RDP plans like Residential RDP, Streaming RDP, Botting, and Encoding RDP, which come equipped with the Latest Generation technology.

BuyCheapRDP offers RDP in more than 20 locations worldwide, including the USA, UK, Netherlands, France, Australia, and the Czech Republic.

The Challenge _

BuyCheapRDP is a reasonably new business established in 2018, and Chandrakant Kumar, IT Administrator at BuyCheapRDP, told us that initially, the company had problems getting started. Firstly, due to buying the wrong subnet, and then because it took a long time to get the IP working correctly. It took seven days to fix the IP, which meant that a lot of time and money was lost. This impacted the growth and development of the business.

RDP (Remote Desktop Protocol) is a powerful tool that enables secure communication between two computers and allows the user to work with other systems remotely. BuyCheapRDP needed to be able to quickly and easily access and integrate IP addresses in order to keep up with high levels of demand.

It also required stable and secure hosting platforms and responsive customer support.

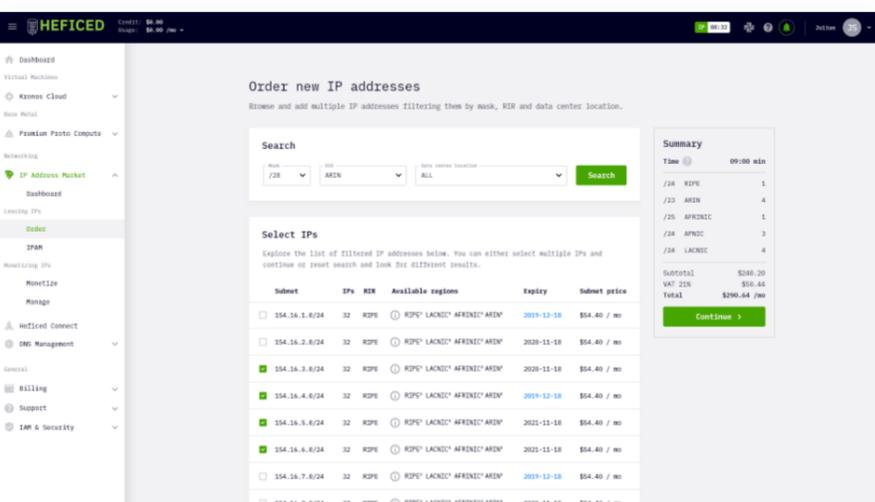

Our Solution _

Through our flexible IP subnets leasing service, we were able to provide BuyCheapRDP with multiple additional IP addresses that could be used in locations all over the world.

Our IP market place provides flexible leasing options and doesn't require long-term commitments or contracts, which means that BuyCheapRDP was able to access the IP addresses it needed when it needed them, and only had to pay for the time it was actually using them.

We also provide direct lines to Heficed support teams, which means that BuyCheapRDP now receives fast resolutions to any problems it experiences.

You can find out more about our IP leasing service here.

Implementation _

BuyCheapRDP is currently leasing IP subnets from Heficed and reported that our IP services are "great" and straightforward to implement.

Result _

Chandrakant Kumar reported that although BuyCheapRDP had only been working with Heficed for a couple of months, he'd found our service to be *"great"* and was impressed with the wide range of IP options that we offer.

As a direct result of working with Heficed, BuyCheapRDP is now able to fulfill all its business needs and can continue with its expansion.

The Future _

BuyCheapRDP continues to grow, and we're looking excited to see how the business develops in the future.

If like BuyCheapRDP, you need additional IP addresses to grow your business, you can find out more about leasing IP addresses here.
